

Fonica

In love with sound...

Fonica

Ladies and Gentlemen,

Fonica phonographs are the epitome of a perfect reproduction of sound and quality. We want the true beauty of sound to set the new trends in the analog audio world.

esigned by specialists, they set out a new course by introducing a unique quality and attention to detail.

The high gloss acrylic and the granite highly valued in the industry constitute an ideal structure basis. The weight of the device resulting from a large surface area and thickness [of the base] provide the necessary stability and effective damping of vibrations.

Fonica

he arm consists of aluminum structure with the steel block base. The stability and integrity with the device is achieved through a stable brass pedestal.

Fonica

F

xcellent reliability and precision combined with the highest quality materials ensure the perfect needle placing and minimize resonance development. The sophisticated mechanism for adjusting the height of the arm may work with any cartridge and thus provides excellent unit rigidity.

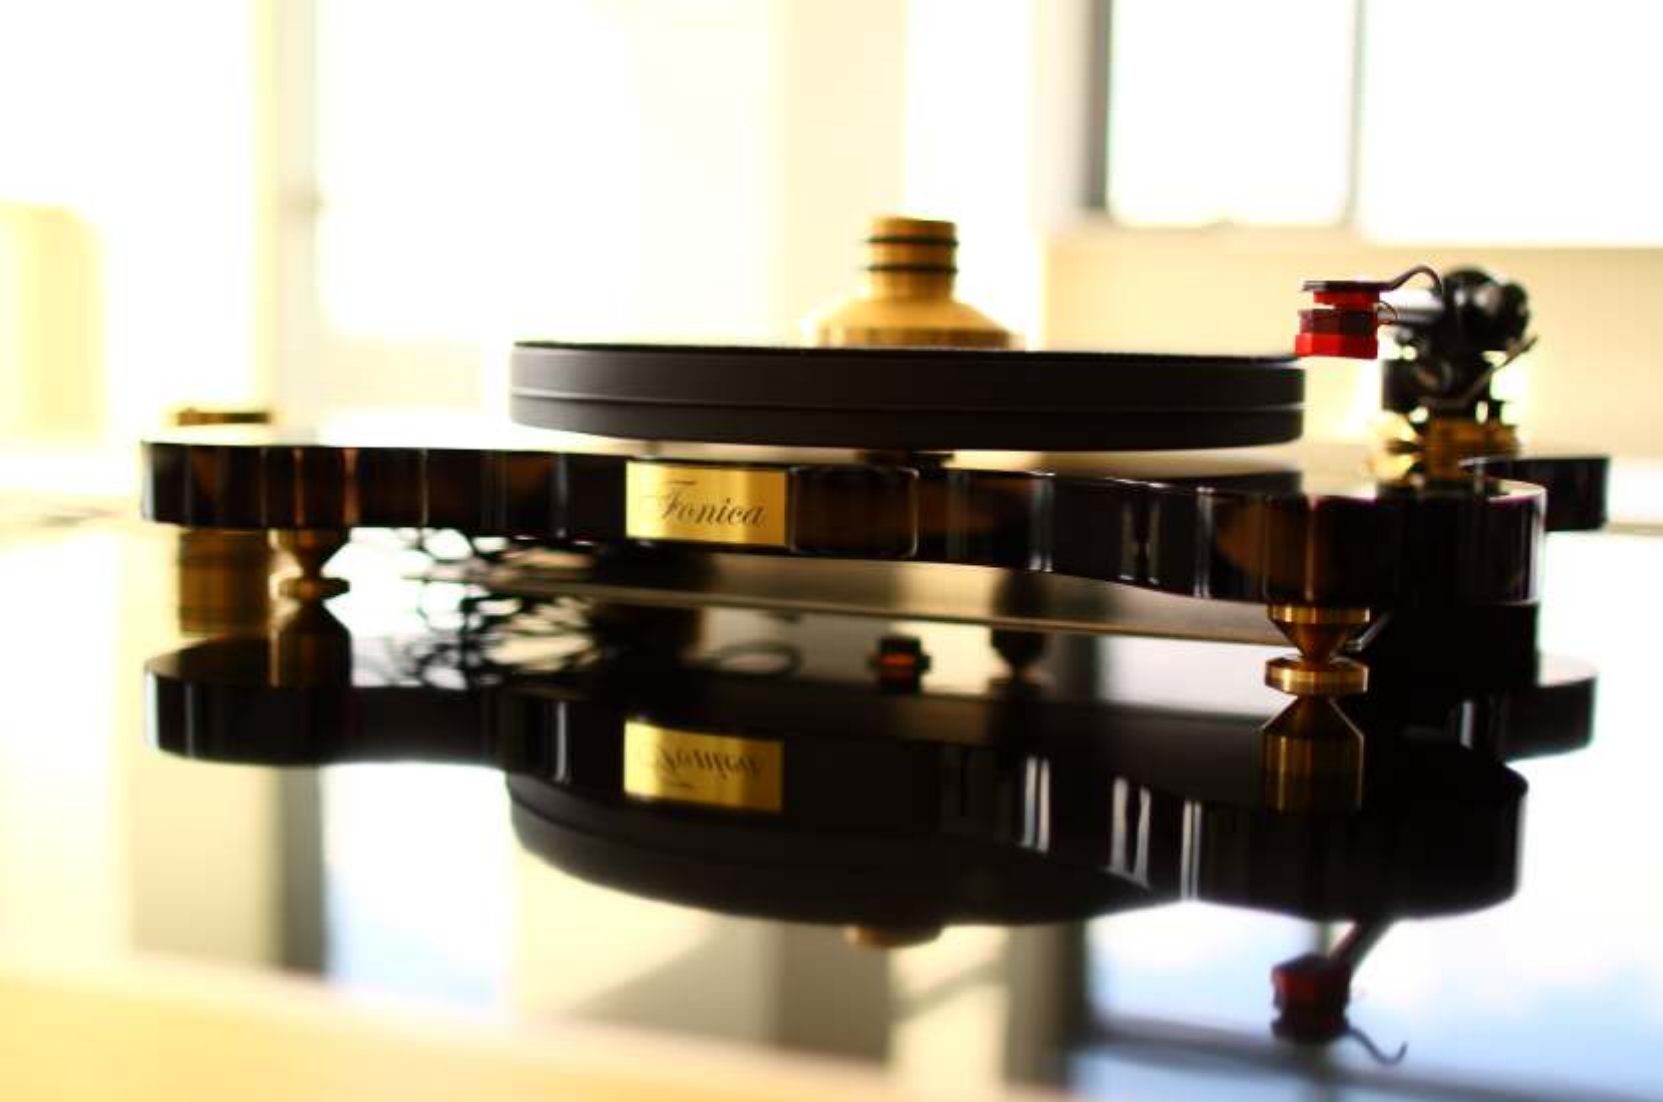

Fonica

he turntable has a very low center of gravity thus eliminating the horizontal plane vibrations. The three brass studs provide excellent insulation from the surface. The top quality sliding bearing guarantees whisper-quiet operation and reduced system vibrations. The outer part supporting the turntable is supported by the bead made of zirconia-the material whose strength is comparable to that of diamond.

Fonica

F

fficient absorbers separating the motor from the base provide the optimal isolation between the phonograph structure vibrations and the drive unit.

The motor controller is equipped with a modern high-precision performance system and provides excellent rotation speed controlled by a dedicated generator.

A perfect coupling between the motor and the turntable ensures perfect transmission, eliminating the undulating rotation and providing damping of the motor at the same time.

Fonica

The

internal connections between the arm and the sockets are made of high quality interconnects. Gold-plated sockets minimize resistance and capacity of connections and provide excellent cartridge signal quality.

Fonica

he device functionality and reliability stem out from its carefully selected components. A timeless design and spectacular sound are fused into outstanding quality and a unique style.

Fonica

F

onica phpnographs are made with
painstaking precision and represent the
perfect devices that will satisfy the most
demanding music lover.

Fonica

F-800

„The timeless texture of natural marble offers beauty that combines tradition and modernity.”

F-600

„Beautifully shaped roundings and elegant lines of contours make up a sleek and uniquely appealing design.”
